Profile

Software developer with almost three years of hands-on experience building and delivering software solutions. I learn quickly and adapt easily to new projects and technologies, which lets me approach complex problems in a structured, effective way. I care about writing clean, maintainable code and turning complex requirements into practical solutions. I work well in teams, take ownership of my work, and continuously look for ways to grow as a developer.

Employment History

Basebuilder (part of Linehub), Utrecht/Almere

FEB 2024 – PRESENT

Basebuilder is a lead generation agency that helps clients find and reach new customers through outbound campaigns.

- Designed, built, and maintained backend services in a microservices architecture (Laravel/Lumen)
- Analysed and resolved production incidents, maintaining system stability across client campaign services
- Built and maintained integrations with external systems and third-party APIs (CRM, email, webhooks) to automate lead activation across client campaigns
- Worked across the full stack with Vue 2 and Vue 3, including independently carrying out a full migration of an internal CMS from Vue 2 to Vue 3
- Worked in a full Agile/Scrum environment with sprints and code reviews; optimized, migrated and standardized CI/CD pipelines across microservices
- Maintained direct contact with clients and their developers to align on campaign requirements and technical deliverables

Education

VWO, Cosmicus College, Rotterdam

SEPT 2008 – MAY 2015

Diploma obtained.

Associate Degree - Software development, Hogeschool Utrecht, Amersfoort

FEB 2023 – NOV 2024

During my Associate Degree in Software Development, I built a solid foundation in Java, starting with core object-oriented programming and progressing to building applications with JavaFX. I worked in Agile/Scrum teams throughout the programme and contributed to a full-stack project using Java Spring Boot for the backend and React with Next.js for the frontend, where I also gained experience with GitLab for version control and collaborative development workflows.
